

Committee on Oversight and Accountability, the major investigative board of the United States House of Representatives, and National Security, the Border and Foreign Affairs subcommittee held session on 26th July concerned with Unidentified Anomalous Phenomena, aka Unidentified Aerial Phenomena or, formerly, known as Unidentified Flying Objects.

In recent years terminology has changed twice but not improved a bit. On contrary, it looks like typical bureaucratic manoeuvre to fuzzy the subject of the discussion.

This is actually an issue of national security vs public interest. I have a solution which could satisfy both sides. If it is super advanced military technology then it should stay hidden. State is not without reason divided into army and civilian sector. Army must have its secrets otherwise it is too vulnerable against potential enemy. But if non-human presence, not necessary of extra-terrestrial origin, was really determined, at any point and in any form, that sole fact should be revealed to the general public. It is a thing that concerns whole world since sightings occur globally. Just that, nothing more. They don't have to reveal precise data. Simple yes will do.

Joint crew of Republican and Democratic members, led by chairman Glenn Grothman, gathered together for purpose of hearing official testimony made by following three witnesses:

David Grusch, ex senior intelligence officer, major by military rank, with extent insight about this topic formerly working at UAP Task Force, currently employed in civilian sector at National Geospatial Intelligence Agency, spoke about multidecade crash retrieval and reverse engineering programs. He complained about retaliation and discreditation made by career officials, both in and out of the government, and their disturbing behaviour directed toward whistleblowers like himself. He mentioned holographic principle meaning that alien crafts could cast shadow in our world moving through alternative dimensions, He also mentioned non human biology entities held by authorities at secret locations.

Ryan Graves, lieutenant by military rank, ex Navy F18 pilot stationed 2014. in Virginia. After his colleagues returned to the base they told him about sighting of a dark grey cube in clear sphere flying at the distance of 50ft (15m) from them meaning that this particular sighting was radar, sensor and visually confirmed. In 2003. 100 yard (91m) UFO flew over Vandenberg, Santa Barbara. He stated that 95% of army pilots do not report encounters out of the fear.

David Fravor, retired Navy commander, 2004. leader of Strike Fighter Squadron 41, also known as the "Black Aces", stationed on USS Nimitz witnessed UFO emerging from water, having no wings and visible propulsion system. Weather was close to perfect, clear sky, light wind. Object looked like popular mint candy Tic Tac showing far superior technology to our current understanding. Sensors were often mysteriously jammed.

This three witnesses are credible people, with long record of service and having nothing to gain by their testimony swored under oath.

Classified data will be revealed at closed session(s).

Commercial air companies haven't implemented security protocols despite the fact that their pilots also see strange objects in the sky.

Mr. Garcia, ranking member of the US Congress committe, in his opening statement, told about restoring faith in institutions and making government work more transparent. We should never rule anything out and keep our minds open.

Mr. Moskowitz, committe member, asked about satellite imagery. Since everything on Earth's surface is constantly recorded why is there no material ever released to prove or disprove particular sighting claims?

Mr Gaetz, committee member, spoke about UAP incident reported several months ago at Eglin AFB. After committee members went there they were denied access. However, they met one crew member who presented an unexplained image of four (4) craft flying in "diamond" formation over the Gulf of Mexico. Since FLIR cameras malfunctioned (!?) image was taken manually. In the middle there was a large floating orb.

Malevolent military-industrial complex

If claims that approximately billion dollar of taxpayers money is missing every year from the US budget are correct then it is obvious how secret programs are conducted under supervision of the privileged group of individuals in the military circles, intelligence agencies and private contractors.

We must not forget serious warning made in 1961. by former US President Dwight Eisenhower, also five (5) star General, in his farewell address, pointed against the establishment of a "military-industrial complex".

It seems to me that exactly MIC, operating independently, is responsible for

some of the UFO sightings while others are genuine. There could be technologies far beyond current human, and even scientific, imagination. Or surely there are.
